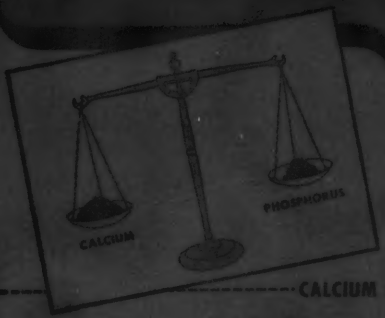
Actual tests show Pard supplies optimum Calcium and Phosphorus in proper balance



The ratio of Calcium to Phosphorus appears to be more important than the actual amounts present. The scale illustrates the nutritional balance achieved thru proper ratio of Calcium to Phosphorus in Pard dog food.

CALCIUM AND PHOSPHORUS CONTENT OF PARD

Based on requirements for rapid growth of pups, and for the female during gestation and lactation.

CALCIUM—Essential, in combination with phosphorus in proper ratio, and with vitamin D, for normal bone and tooth structure. Also important in certain functions of heart, nerve and muscle tissue.

PHOSPHORUS—Vital, in combination with Calcium in proper ratio, and with vitamin D, for normal bone and tooth structure. Necessary for activation of certain enzymes. Important in metabolism of carbohydrates and fats and normal activity of the muscles.

A top Doberman of recent times, Int. Ch. Jessy von der Sonnenhaehe, was twice Grand Champion of Germany and never defeated in her breed in this country. Owned by F. F. H. Heilman, Jessy produced 15 champions, including a German Siegert and Figurers.

IN BREEDING... IN FEEDING

Standards Change!

● Gone are the days when a straight diet of meat was considered adequate. Gone, too, are the days of elaborate home-cooked and supplemented foods. Advancing science has brought better foods and easier feeding.

The Gaines formula of 18 years ago was a first, great step—sensationally ahead of its time. As later research set new standards, Gaines scientists improved the formula to keep pace with widened knowledge—led the way to still higher standards.

Continuous improvement makes the GAINES of today a food that more than meets standards of today—a food that supplies every element dogs are now known to need. A stand-by in the feeding of present-day dogs, GAINES is the leading brand among breeders—America's largest-selling dog food.
